Deductive Reasoning

The essence

Knowledge obtained via assumptions and logical rules

Deductive Reasoning

The essence

Knowledge obtained via assumptions and logical rules

Studied since Aristotle . . .

... long before the age of artificial computers

What does it have to do with programming?

A Basic Deductive System

 $\mathbb{A}, \mathbb{B}\dots$ denote <u>propositions</u> and 1 a proposition that always holds

If \mathbb{A} and \mathbb{B} are propositions then

- $\mathbb{A} \times \mathbb{B}$ is a proposition conjunction of \mathbb{A} and \mathbb{B}
- $\mathbb{A} \to \mathbb{B}$ is a proposition implication of \mathbb{B} from \mathbb{A}

A Basic Deductive System

Γ denotes a list of propositions (often called context)

 $\Gamma \vdash \mathbb{A}$ reads "if the propositions in Γ hold then \mathbb{A} also holds"

$$\frac{\mathbb{A} \in \Gamma}{\Gamma \vdash \mathbb{A}} \text{ (ass)} \qquad \frac{\Gamma \vdash \mathbb{A} \times \mathbb{B}}{\Gamma \vdash \mathbb{A}} \text{ (π_1)} \qquad \frac{\Gamma \vdash \mathbb{A} \times \mathbb{B}}{\Gamma \vdash \mathbb{B}} \text{ (π_2)}$$

$$\frac{\Gamma \vdash \mathbb{A} \qquad \Gamma \vdash \mathbb{B}}{\Gamma \vdash \mathbb{A} \times \mathbb{B}} \text{ (prd)} \qquad \frac{\Gamma, \mathbb{A} \vdash \mathbb{B}}{\Gamma \vdash \mathbb{A} \to \mathbb{B}} \text{ (cry)} \qquad \frac{\Gamma \vdash \mathbb{A} \to \mathbb{B} \qquad \Gamma \vdash \mathbb{A}}{\Gamma \vdash \mathbb{B}} \text{ (app)}$$

Exercise

Show that $\mathbb{A} \times \mathbb{B} \vdash \mathbb{B} \times \mathbb{A}$

Renato Neves The Calculus 5 / 34

The rules below are derivable from the previous system

$$\frac{\Gamma, \mathbb{A}, \mathbb{B}, \Delta \vdash \mathbb{C}}{\Gamma, \mathbb{B}, \mathbb{A}, \Delta \vdash \mathbb{C}} \text{ (exchange)} \qquad \qquad \frac{\Gamma \vdash \mathbb{A}}{\Gamma, \mathbb{B} \vdash \mathbb{A}} \text{ (weakening)}$$

$$\frac{\Gamma,\,\mathbb{A}\vdash\mathbb{B}\quad\Gamma\vdash\mathbb{A}}{\Gamma\vdash\mathbb{B}}$$
 (cut elimination)

Proofs (again) by an appeal to your old friend . . . induction :-)

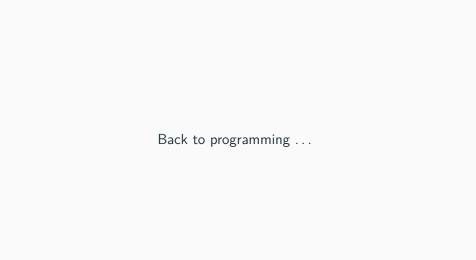

The Calculus 6 / 34

Exercises

Derive the following judgements

•
$$\mathbb{A} \to \mathbb{B}, \mathbb{B} \to \mathbb{C} \vdash \mathbb{A} \to \mathbb{C}$$

$$\bullet \quad \mathbb{A} \to \mathbb{B}, \mathbb{A} \to \mathbb{C} \vdash \mathbb{A} \to \mathbb{B} \times \mathbb{C}$$

The Bare Essentials of Programming

We should think of what are the basic features of programming . . .

- variables
- function application and creation
- pairing . . .

and base our study on the $\underline{\text{simplest language}}$ with such features . . .

Simply-typed λ -calculus

The basis of Haskell, ML, Eff, F#, Agda, Elm and many other programming languages

Renato Neves The Calculus 9 / 34

Simply-typed λ -Calculus

Types are defined by $\mathbb{A} ::= 1 \mid \mathbb{A} \times \mathbb{A} \mid \mathbb{A} \to \mathbb{A}$

 Γ now a non-repetitive list of typed variables $(x_1 : \mathbb{A}_1 \dots x_n : \mathbb{A}_n)$

Programs built according to the following deduction rules

$$\frac{x:\mathbb{A}\in\Gamma}{\Gamma\vdash x:\mathbb{A}} \text{ (ass)} \qquad \qquad \frac{\Gamma\vdash t:\mathbb{A}\times\mathbb{B}}{\Gamma\vdash \pi_1\,t:\mathbb{A}} \text{ (π_1)}$$

$$\frac{\Gamma \vdash t : \mathbb{A} \qquad \Gamma \vdash s : \mathbb{B}}{\Gamma \vdash \langle t, s \rangle : \mathbb{A} \times \mathbb{B}} \text{ (prd)} \qquad \frac{\Gamma, x : \mathbb{A} \vdash t : \mathbb{B}}{\Gamma \vdash \lambda x : \mathbb{A} \cdot t : \mathbb{A} \to \mathbb{B}} \text{ (cry)}$$

$$\frac{\Gamma \vdash t : \mathbb{A} \to \mathbb{B} \quad \Gamma \vdash s : \mathbb{A}}{\Gamma \vdash t s : \mathbb{B}} \text{ (app)}$$

Renato Neves The Calculus 10 / 34

Examples of λ -terms

$$x : \mathbb{A} \vdash x : \mathbb{A}$$
 (identity)

$$x : \mathbb{A} \vdash \langle x, x \rangle : \mathbb{A} \times \mathbb{A}$$
 (duplication)

$$x : \mathbb{A} \times \mathbb{B} \vdash \langle \pi_2 \ x, \pi_1 \ x \rangle : \mathbb{B} \times \mathbb{A}$$
 (swap)

$$f: \mathbb{A} \to \mathbb{B}, g: \mathbb{B} \to \mathbb{C} \vdash \lambda x: \mathbb{A}. \ g(f \ x): \mathbb{A} \to \mathbb{C} \qquad \text{(composition)}$$

Renato Neves The Calculus 11 / 34

Exercises

Recall the derivations that lead to the judgement

$$\mathbb{A} \to \mathbb{B}, \mathbb{A} \to \mathbb{C} \vdash \mathbb{A} \to \mathbb{B} \times \mathbb{C}$$

Build the corresponding program

Derive as well the judgement

$$\mathbb{A} \to \mathbb{B} \vdash \mathbb{A} \times \mathbb{C} \to \mathbb{B} \times \mathbb{C}$$

and subsequently build the corresponding program

A Semantics for Simply Typed λ -calculus

We wish to assign a mathematical meaning to λ -terms

$$\llbracket - \rrbracket : \lambda$$
-terms $\longrightarrow \dots$

so that we can reason about them rigorously, and take advantage of known mathematical theories

A Semantics for Simply Typed λ -calculus

We wish to assign a mathematical meaning to λ -terms

$$\llbracket - \rrbracket : \lambda$$
-terms $\longrightarrow \dots$

so that we can reason about them rigorously, and take advantage of known mathematical theories

This is the goal of the next slides. But first ...

Functions: Basic Facts

For every set X there exists a 'trivial' function

$$!: X \longrightarrow \{\star\} = 1$$
 $!(x) = \star$

We can always pair two functions into $f: X \to A$, $g: X \to B$

$$\langle f, g \rangle : X \to A \times B$$
 $\langle f, g \rangle (x) = (f x, g x)$

There exist projection functions

$$\pi_1: X \times Y \to X$$
 $\pi_1(x, y) = x$
 $\pi_2: X \times Y \to Y$ $\pi_2(x, y) = y$

Functions: Basic Facts

We can always 'curry' a function $f: X \times Y \rightarrow Z$ into

$$\lambda f: X \to Z^Y$$
 $\lambda f(x) = (y \mapsto f(x, y))$

Consider sets X, Y, Z. There exists an application function

$$\operatorname{app}: Z^Y \times Y \to Z \qquad \operatorname{app}(f, y) = f y$$

Denotational Semantics

Types \mathbb{A} interpreted as <u>sets</u> $[\![\mathbb{A}]\!]$

$$\begin{bmatrix} 1 \end{bmatrix} = \{ \star \} \\
 \begin{bmatrix} \mathbb{A} \times \mathbb{B} \end{bmatrix} = \begin{bmatrix} \mathbb{A} \end{bmatrix} \times \begin{bmatrix} \mathbb{B} \end{bmatrix} \\
 \begin{bmatrix} \mathbb{A} \to \mathbb{B} \end{bmatrix} = \begin{bmatrix} \mathbb{B} \end{bmatrix} \begin{bmatrix} \mathbb{A} \end{bmatrix}$$

Typing contexts Γ interpreted as Cartesian products

$$[\![\Gamma]\!] = [\![x_1 : \mathbb{A}_1, \dots, x_n : \mathbb{A}_n]\!] = [\![\mathbb{A}_1]\!] \times \dots \times [\![\mathbb{A}_n]\!]$$

 λ -terms $\Gamma \vdash t : \mathbb{A}$ interpreted as functions

$$\llbracket \Gamma \vdash t : \mathbb{A} \rrbracket : \llbracket \Gamma \rrbracket \longrightarrow \llbracket \mathbb{A} \rrbracket$$

Denotational Semantics

 λ -term $\Gamma \vdash t : \mathbb{A}$ interpreted as a function

$$\llbracket \Gamma \vdash t : \mathbb{A} \rrbracket : \llbracket \Gamma \rrbracket \longrightarrow \llbracket \mathbb{A} \rrbracket$$

$$\underbrace{x_i : \mathbb{A} \in \Gamma }_{\llbracket \Gamma \vdash x_i : \mathbb{A} \rrbracket = \pi_i} \qquad \underbrace{\llbracket \Gamma \vdash t : \mathbb{A} \times \mathbb{B} \rrbracket = f}_{\llbracket \Gamma \vdash \pi_1 t : \mathbb{A} \rrbracket = \pi_1 \cdot f}$$

$$\frac{ \llbracket \Gamma \vdash t : \mathbb{A} \rrbracket = f \quad \llbracket \Gamma \vdash s : \mathbb{B} \rrbracket = g }{ \llbracket \Gamma \vdash \langle t, s \rangle : \mathbb{A} \times \mathbb{B} \rrbracket = \langle f, g \rangle } \quad \frac{ \llbracket \Gamma, x : \mathbb{A} \vdash t : \mathbb{B} \rrbracket = f }{ \llbracket \Gamma \vdash \lambda x : \mathbb{A} . t : \mathbb{A} \to \mathbb{B} \rrbracket = \lambda f }$$

$$\frac{\llbracket \Gamma \vdash t : \mathbb{A} \to \mathbb{B} \rrbracket = f \quad \llbracket \Gamma \vdash s : \mathbb{A} \rrbracket = g}{\llbracket \Gamma \vdash t s : \mathbb{B} \rrbracket = \operatorname{app} \cdot \langle f, g \rangle}$$

The Unravelling

$$\begin{bmatrix} x \vdash \langle \pi_2 x, \pi_1 x \rangle \end{bmatrix} &= \dots \\ \begin{bmatrix} - \vdash \lambda x. \langle \pi_2 x, \pi_1 x \rangle \end{bmatrix} &= \dots \\ \begin{bmatrix} f, g, x \vdash g f x \end{bmatrix} &= \dots \\ \begin{bmatrix} f, g \vdash \lambda x. g f x \end{bmatrix} &= \dots \\ \begin{bmatrix} f, x \vdash \langle f \pi_1 x, \pi_2 x \rangle \end{bmatrix} &= \dots \\ \begin{bmatrix} f \vdash \lambda x. \langle f \pi_1 x, \pi_2 x \rangle \end{bmatrix} &= \dots \\ \begin{bmatrix} - \vdash \lambda f. \lambda x. \langle f \pi_1 x, \pi_2 x \rangle \end{bmatrix} &= \dots \\ \end{bmatrix}$$

(N.B. all types omitted for simplicity)

Renato Neves Denotational Semantics 19/34

Denotational Semantics and Equivalence Revisited

Show that the following equations hold

$$\begin{bmatrix} x, y \vdash \pi_1 \langle x, y \rangle \end{bmatrix} = \begin{bmatrix} x, y \vdash x \end{bmatrix} \\
 \begin{bmatrix} \Gamma \vdash t \end{bmatrix} = \begin{bmatrix} \Gamma \vdash \langle \pi_1 \ t, \pi_2 \ t \rangle \end{bmatrix} \\
 \begin{bmatrix} x \vdash (\lambda y. \langle x, y \rangle) \ x \end{bmatrix} = \begin{bmatrix} x \vdash \langle x, x \rangle \end{bmatrix}$$

Renato Neves Denotational Semantics 20 / 34

Denotational Semantics and Equivalence Revisited

Show that the following equations hold

Show that the (complicated) λ -term below is really just the identity

$$z \vdash \lambda x. \langle \pi_2 x, \pi_1 x \rangle \left(\lambda y. \langle \pi_2 y, \pi_1 y \rangle z \right)$$

Renato Neves Denotational Semantics 20 / 34

Denotational Semantics and Equivalence Revisited

Show that the following equations hold

Show that the (complicated) λ -term below is really just the identity

$$z \vdash \lambda x. \langle \pi_2 x, \pi_1 x \rangle \left(\lambda y. \langle \pi_2 y, \pi_1 y \rangle z \right)$$

Hard?

Logic to the Rescue!

Recall that the rules below are derivable from our logical system

$$\frac{\Gamma, \mathbb{A}, \mathbb{B}, \Delta \vdash \mathbb{C}}{\Gamma, \mathbb{B}, \mathbb{A}, \Delta \vdash \mathbb{C}} \text{ (exchange)} \qquad \qquad \frac{\Gamma \vdash \mathbb{A}}{\Gamma, \mathbb{B} \vdash \mathbb{A}} \text{ (weakening)}$$

$$\frac{\Gamma, \mathbb{A} \vdash \mathbb{B} \qquad \Gamma \vdash \mathbb{A}}{\Gamma \vdash \mathbb{B}} \text{ (cut elimination)}$$

Renato Neves Equational System 22 / 34

$$\frac{\Gamma, x: \mathbb{A}, y: \mathbb{B}, \Delta \vdash t: \mathbb{C}}{\Gamma, y: \mathbb{B}, x: \mathbb{A}, \Delta \vdash t: \mathbb{C}} \text{ (exch)}$$

$$\frac{\Gamma \vdash t : \mathbb{A}}{\Gamma, x : \mathbb{B} \vdash t : \mathbb{A}} \text{ (weak)}$$

$$\frac{\Gamma, x : \mathbb{A} \vdash t : \mathbb{B} \qquad \Gamma \vdash s : \mathbb{A}}{\Gamma \vdash \cdots : \mathbb{B}}$$
 (cut elimination)

Renato Neves Equational System 23 / 34

$$\frac{\Gamma, x : \mathbb{A}, y : \mathbb{B}, \Delta \vdash t : \mathbb{C}}{\Gamma, y : \mathbb{B}, x : \mathbb{A}, \Delta \vdash t : \mathbb{C}} \text{ (exch)} \qquad \frac{\Gamma \vdash t : \mathbb{A}}{\Gamma, x : \mathbb{B} \vdash t : \mathbb{A}} \text{ (weak)}$$

$$\frac{\Gamma, x : \mathbb{A} \vdash t : \mathbb{B} \qquad \Gamma \vdash s : \mathbb{A}}{\Gamma \vdash \cdots \vdash \mathbb{B}} \text{ (cut elimination)}$$

Filling up the dots will lead us to a fundamental concept

Renato Neves Equational System 23 / 34

$$\frac{\Gamma, x : \mathbb{A}, y : \mathbb{B}, \Delta \vdash t : \mathbb{C}}{\Gamma, y : \mathbb{B}, x : \mathbb{A}, \Delta \vdash t : \mathbb{C}} \text{ (exch)} \qquad \frac{\Gamma \vdash t : \mathbb{A}}{\Gamma, x : \mathbb{B} \vdash t : \mathbb{A}} \text{ (weak)}$$

$$\frac{\Gamma, x : \mathbb{A} \vdash t : \mathbb{B} \qquad \Gamma \vdash s : \mathbb{A}}{\Gamma \vdash \cdots \vdash \mathbb{B}} \text{ (cut elimination)}$$

Filling up the dots will lead us to a fundamental concept

Substitution

Renato Neves Equational System 23 / 34

Substitution

The essence

Substitution of variables in a λ -term t by another λ -term s

t[s/x] reads "replace every occurrence of x in t by s"

Renato Neves Equational System 24 / 34

Substitution

The essence

Substitution of variables in a λ -term t by another λ -term s

t[s/x] reads "replace every occurrence of x in t by s"

Example

$$\langle x, x \rangle [s/x] = \langle s, s \rangle$$

$$\langle x, y \rangle [s/x] = \langle s, y \rangle$$

$$\langle y, z \rangle [s/x] = \langle y, z \rangle$$

Substitution More Formally

We define it by induction

$$x[s/y] = \begin{cases} s & \text{if } x = y \\ x & \text{otherwise} \end{cases}$$

$$*[s/y] = *$$

$$\langle t_1, t_2 \rangle [s/y] = \langle t_1[s/y], t_2[s/y] \rangle$$

$$(t_1 t_2)[s/y] = t_1[s/y] t_2[s/y]$$

$$(\pi_1 t)[s/y] = \pi_1 t[s/y]$$

$$(\pi_2 t)[s/y] = \pi_2 t[s/y]$$

$$(\lambda x. t)[s/y] = \dots$$

 $\lambda x. y$ is a "constant function" (given x return y)

```
\lambda x. y is a "constant function" (given x return y) (\lambda x. y)[z/y] \text{ is still a "constant function" (given <math>x return z)}
```

Renato Neves Equational System 26 / 34

```
\lambda x. y is a "constant function" (given x return y)
(\lambda x. y)[z/y] \text{ is still a "constant function" (given <math>x return z)}
(\lambda x. y)[x/y] \text{ is now the identity } !?
```

Renato Neves Equational System 26 / 34

```
\lambda x. y is a "constant function" (given x return y) (\lambda x. y)[z/y] is still a "constant function" (given x return z) (\lambda x. y)[x/y] is now the identity !?
```

The problem: variable x "captured" by the construct " λx ."

Somehow similar to variable shadowing in programming

Substitution More Formally

$$x[s/x] = \begin{cases} s & \text{if } x = y \\ x & \text{otherwise} \end{cases}$$

$$*[s/y] = *$$

$$\langle t_1, t_2 \rangle [s/y] = \langle t_1[s/y], t_2[s/y] \rangle$$

$$(t_1 t_2)[s/y] = t_1[s/y] t_2[s/y]$$

$$(\pi_1 t)[s/y] = \pi_1 t[s/y]$$

$$(\pi_2 t)[s/y] = \pi_2 t[s/y]$$

$$(\lambda x. t)[s/y] = \lambda z. t[z/x][s/y]$$
(where z is fresh (i.e. new))

Renato Neves Equational System 27 / 34

Exercise

Compute the following substitutions

$$* [t/y][s/z] = \dots$$

$$\langle y, z \rangle [t/y][s/z] = \dots$$

$$(\lambda x. x)[t/x] = \dots$$

$$(\lambda x. \langle x, y \rangle)[z/y] = \dots$$

$$(\lambda x. \langle x, y \rangle)[x/y] = \dots$$

Renato Neves Equational System 28 / 34

$$\frac{\Gamma,x:\mathbb{A},y:\mathbb{B},\Delta\vdash t:\mathbb{C}}{\Gamma,y:\mathbb{B},x:\mathbb{A},\Delta\vdash t:\mathbb{C}} \text{ (exch)} \qquad \qquad \frac{\Gamma\vdash t:\mathbb{A}}{\Gamma,x:\mathbb{B}\vdash t:\mathbb{A}} \text{ (weak)}$$

$$\frac{\Gamma,x:\mathbb{A}\vdash t:\mathbb{B} \qquad \Gamma\vdash s:\mathbb{A}}{\Gamma\vdash\cdots:\mathbb{B}} \text{ (cut elimination)}$$

Renato Neves Equational System 29 / 34

$$\frac{\Gamma, x : \mathbb{A}, y : \mathbb{B}, \Delta \vdash t : \mathbb{C}}{\Gamma, y : \mathbb{B}, x : \mathbb{A}, \Delta \vdash t : \mathbb{C}} \text{ (exch)} \qquad \qquad \frac{\Gamma \vdash t : \mathbb{A}}{\Gamma, x : \mathbb{B} \vdash t : \mathbb{A}} \text{ (weak)}$$

$$\frac{\Gamma, x : \mathbb{A} \vdash t : \mathbb{B} \qquad \Gamma \vdash s : \mathbb{A}}{\Gamma \vdash t[s/x] : \mathbb{B}} \text{ (cut elimination)}$$

Renato Neves Equational System 30 / 34

$$\frac{\Gamma, x : \mathbb{A}, y : \mathbb{B}, \Delta \vdash t : \mathbb{C}}{\Gamma, y : \mathbb{B}, x : \mathbb{A}, \Delta \vdash t : \mathbb{C}} \text{ (exch)} \qquad \qquad \frac{\Gamma \vdash t : \mathbb{A}}{\Gamma, x : \mathbb{B} \vdash t : \mathbb{A}} \text{ (weak)}$$

$$\frac{\Gamma, x : \mathbb{A} \vdash t : \mathbb{B} \qquad \Gamma \vdash s : \mathbb{A}}{\Gamma \vdash t[s/x] : \mathbb{B}} \text{ (cut elimination)}$$

Substitution also fundamental in the study of equivalence

Renato Neves Equational System 30 / 34

An Equational System pt. I

$$\pi_1 \langle t, s \rangle =_{\beta \eta} t$$
 $t =_{\beta \eta} *$ (if $t:1$)
 $\pi_2 \langle t, s \rangle =_{\beta \eta} s$ $\lambda x. t s =_{\beta \eta} t [s/x]$
 $\langle \pi_1 t, \pi_2 t \rangle =_{\beta \eta} t$ $\lambda x. (tx) =_{\beta \eta} t$

An Equational System pt. II

 $\Gamma \vdash t =_{\beta\eta} s$

 $\pi\Gamma \vdash t =_{\beta n} s$

$$t =_{\beta\eta} t \qquad \frac{t =_{\beta\eta} s}{s =_{\beta\eta} t} \qquad \frac{t =_{\beta\eta} s}{t =_{\beta\eta} u}$$

$$\frac{t =_{\beta\eta} s}{\pi_1 t =_{\beta\eta} \pi_1 s} \qquad \frac{t =_{\beta\eta} s}{\pi_2 t =_{\beta\eta} \pi_2 s} \qquad \frac{t =_{\beta\eta} s}{\langle t, u \rangle =_{\beta\eta} \langle s, v \rangle}$$

$$\frac{t =_{\beta\eta} s}{t =_{\beta\eta} s} \qquad \frac{t =_{\beta\eta} s}{\langle t, u \rangle =_{\beta\eta} \langle s, v \rangle}$$

Renato Neves Equational System 32 / 34

 $u =_{\beta\eta} v$ $t =_{\beta\eta} s$

 $u[t/x] =_{\beta n} v[s/x]$

Equivalence Re-Revisited

Show that the following equations hold

$$\pi_{1}\langle x, y \rangle =_{\beta\eta} x$$

$$t =_{\beta\eta} \langle \pi_{1} \ t, \pi_{2} \ t \rangle$$

$$(\lambda y. \langle x, y \rangle) \ x =_{\beta\eta} \langle x, x \rangle$$

$$\lambda x. \langle \pi_{2} x, \pi_{1} x \rangle \left(\lambda y. \langle \pi_{2} y, \pi_{1} y \rangle z \right) =_{\beta\eta} z$$
